

ODOO | ODOO STUDIO

Create and Customize
in Minutes

All you need to **build custom applications.**

You become the developer.

Create beautiful Applications

Design beautiful and full featured apps in minutes, not weeks.

Design awesome Reports

Build great reports with our awesome report builder.

Customize advanced Screen

More than just forms, customize graphs, kanban, pivot tables, gantt charts, matrix, etc.

Automate business Workflows

Add business logic to your application, automate tasks with no development.

Get Productive

Boost your app with an email gateway, the report engine, BI, workflows, etc.

Get a Mobile App

Your apps will automatically have a responsive, mobile user interface.

Odoo Studio Features

Overview

Code-Less

Create custom applications in minutes rather than weeks, with no development.

Developer Friendly

Unlock the developer mode to get access to technical details.

Mobile Apps

Design your custom application once, and get a desktop and a mobile app automatically.

Scale easily

Odoo Studio is built for large companies with millions of records. The generated applications are blazing fast.

Screen Designer

Forms

Create advanced forms with notebooks, inline discussion widgets, integrated statistics, etc.

Lists

Create read-only or read-write lists that look like Excel spreadsheets.

Pivot Table

Create custom pivot tables on the data; drill-down on any dimension and display several measures.

Calendar

Use the calendar view to manage documents linked to a schedule.

Website Forms

Create website forms to allow your visitors to create records directly from your website.

Kanban

Design cards that can be dragged & dropped in columns for process-oriented documents.

Graphs

Get beautiful statistics on your custom objects with the graph views: pie charts, line charts, bar charts, etc.

Gantt Charts

Gantt charts are great for time-related documents like events, meetings, planning, etc.

Grid

The grid view is convenient to massively edit records with a multi-dimensions matrix view.

Features

Import

Match your custom columns with .CSV or .XLS files to add records or update existing ones.

Export

Create export templates based on your custom objects to reuse them easily.

Automations

Perform batch actions in a selection of records: delete, automations, etc.

Menu Editor

Reorganize your application menu with drag & drops, and create new menus in just a click.

Email Gateway

Get the email gateway directly connected to your app to create records or to discuss by email easily.

Search

Customize your search bar and use advanced features like grouping, filtering and access rights.

API

Get a web-service API to access all your custom objects easily. No extra code required.

Conditional Properties

Make your fields invisible, required or read only under certain conditions.

Reports

Templates

Use predefined report templates to create your own reports easily.

Multi-Languages

Reports are automatically printed in the language of the recipient (customer, vendor, etc.)

XML Editor

Use the XML editor for advanced reporting customizations based on HTML.

Automation

Send Emails

Automate emails based on actions, time or conditional statements to ease the relationship with your customers.

Python Code

Use python code to develop advanced automations. Sky is the limit.

Update Values

Automate updates based on conditional statements. Example: set the priority field to 'Urgent' if no responsible is assigned after 5 days.

Miscellaneous

Translations Manager

Your application and its user content will automatically run in multiple languages.

Inherit Odoo's features

Benefit from existing Odoo features to easily build advanced applications in minutes.

Share

Share your customizations with your friends and colleagues simply by sharing an URL.

Access Rights

Create ACLs rules or filters to define access rights for larger companies.

Integrated Documentation

Every Odoo Studio database has a collaborative notepad where you can document your customizations for your team.

Icon Designer

Design your own app icon, make it yours.
