**Improve performance & process time**  
Better organize your warehouse with the smart double entry inventory system.

Get the most efficient stocking method and improve all your internal operations. Odoo's double-entry inventory has no stock input, output or transformation. Instead, all operations are stock moves between locations.

# Odoo Inventory Features

## Clean and Fast

### Double Entry Inventory

The unique Odoo double entry inventory management allows full traceability from the supplier to the customer. Nothing is lost, everything is moved.

### Mobile

Scan products in your warehouse using the barcode scanner. Control your dashboards and track orders wherever you are.

### Corrected posted transactions

You are now able to update any transaction (picking, manufacturing order) after being posted through the new lock/unlock button.

### Modern User Interface

A fast user interface designed for modern inventory management. Get more work done with less effort with or without barcode scanners.

### Flexible

Easily manage a single inventory or a complex multi-warehouses environment by activating features on demand.

## Create Professional Quotations

### Delivery Orders

Pack orders and deliver with or without barcode scanners. Odoo prepares delivery orders for you based on availabilities

### Inventory Adjustments

Do an inventory for a zone, a specific product, a lot or a pallet/box; Odoo prepares cycle counts for you.

### Multiple Locations

Use hierarchical locations to structure your warehouse: zones, rows, shelves, etc.

### Manufacturing, Repairs

Use extra apps to manage manufacturing orders, repairs orders, etc.

### Receipts

Control incoming products and compare to what was ordered from the supplier.

### Packing

Pack products in just a click and assign barcodes to packs for an easy tracking of the orders.

### Scrap Products

Scrap products in just a few clicks and get clear reports on scrap: their costs, reasons and volumes.

### Stock Transfers

Use the simple transfer interface to move products from one location to another.

## Advanced Routing

### Drop-shipping

Deliver to customers straight from your supplier based on products, orders or customers.

### Cross-Docking

Unload incoming material and directly transfer to outbound gates with little to no storage in between.

### Put away & Removal strategies

Define your own storage and removal strategies; fifo, nearest available zone, lifo, etc.

### Pick - Pack - Ship

Design your own order process flow. Deliver to customers in one step (delivery order) or several steps: picking, packing, shipping.

### Push & Pull Routes

Design your own product routes to automate transfer orders between warehouses or locations.

### Multi-Warehouses

Manage all your warehouses with the same system and define replenishment rules between warehouses.

## Productivity

### Barcode Scanners

Nice unified interface. Use barcode scanners for every inventory operation: inventories, incoming shipments, packing orders, etc. Scan the goods and confirm the reception or sending of those only through the scanner (no keyboard needed). Support EAN13, EAN14.

### Customer Portal

Your customer can track their order status into the customer portal: orders, invoices, delivery order status, etc.

### Smart Scheduler

Odoo's scheduler will trigger all operations automatically for you based on product availabilities and forecasts of orders.

### Powerful search

Search documents to process easily. Just scan a barcode or filter based on any criteria: customer, product, etc.

### Custom Alerts

Define alerts on products or suppliers that should appear for a salesperson when they make quotations.

## Replenishments

### Minimum Stock

Have proposition of purchase orders (or request for quotations) created by Odoo based on your future stock forecast.

### Request for Quotations

Want to negotiate a price with suppliers every time you buy a specific product? Odoo can trigger request for quotations automatically based on future needs.

### Make-to-Order

Purchase raw materials or manufacture products to order. Define your own routes specific to warehouses, products, orders, etc.

## Replenishments

### Minimum Stock

Have proposition of purchase orders (or request for quotations) created by Odoo based on your future stock forecast.

### Request for Quotations

Want to negotiate a price with suppliers every time you buy a specific product? Odoo can trigger request for quotations automatically based on future needs.

### Make-to-Order

Purchase raw materials or manufacture products to order. Define your own routes specific to warehouses, products, orders, etc.

## Traceability

### Activity Log

Have the history of all operations attached to every document (picking, delivery order, quality control) for full traceability.

### Serial Numbers Tracking

Tracks manufacturer lots with barcode or serial numbers. Define and choose which transactions require tracking (delivery orders, receptions, internal moves, etc.)

### Perpetual Valuation

Get your inventory valuation posted in real time in your accounting software for an accurate balance sheet in real time.

## Products

### Product Types

Odoo supports several product types that have different behaviour: physical products, consumables, services, digital products.

### Custom fields

Add as many custom fields as you want on products to handle your business needs.

### Multiple unit of measures

Odoo supports multiple unit of measures and converts automatically for you: buy per tons and sell in kg.

### Multiple barcodes

Create custom barcodes with specific codes to implement desired behaviors, such as a specific promotion.

### Expiration Dates

Track expiration dates on products.

## Replenishments

### Minimum Stock

Have proposition of purchase orders (or request for quotations) created by Odoo based on your future stock forecast.

### Request for Quotations

Want to negotiate a price with suppliers every time you buy a specific product? Odoo can trigger request for quotations automatically based on future needs.

### Make-to-Order

Purchase raw materials or manufacture products to order. Define your own routes specific to warehouses, products, orders, etc.

## Inventory Valuation

### Costing Methods

Odoo WMS supports FIFO, Average Cost (AVCO) and Standard Price for product costing methods.

### Landed Costs

Reincorporate landed costs into your product cost to get an accurate valuation of your inventory.

### Valuation Methods

Use continental or Anglo-Saxon accounting (to record cost of goods sold)

### Perpetual Inventory Valuation

Set up perpetual (real time, automated) or periodic inventory valuation mode by product.

## Reporting

### Dashboard

Use predefined dashboards or build your own with the advanced reporting engine. Share filters with the team.

### Inventory Forecast

Get forecasts of product availabilities based on confirmed sales orders, purchase orders or manufacturing orders as well as internal moves.
