Cloud Accounting

Designed specifically for small to medium sized manufacturers.

Reduce inventory costs

Eliminate purchasing errors

Improve production efficiency

Analyze production costs more accurately

Integrate manufacturing and accounting

MISys Manufacturing
comes complete with

12 months Maintenance and Support

SureStart Data Conversion Coach

60-Day Money Back Guarantee

We're on a mission to make manufacturing more efficient.

MISys Manufacturing[®] is an affordable and comprehensive software that enables manufacturers to efficiently manage their production related activities. The software is designed for small to medium sized manufacturers and integrates with the most widely used accounting software. MISys Manufacturing software is used by over 8,000 companies in 48 countries.

Off-the-Shelf & Ready to Go

MISys Manufacturing is designed for immediate implementation and is easy to learn. MISys continues to introduce dozens of user interface (UI) enhancements to make the software easier to use in daily activities. Overall, the product is designed to look and feel like familiar email and word-processing programs.

A MISys SureStart coach guides new users through the conversion of data from existing systems (including spreadsheets) into MISys Manufacturing to get the system up and running as quickly as possible.

Flexible Deployment Options

MISys Manufacturing can be installed as an on premise solution on a desktop PC or shared across a network. Alternatively, you can deploy MISys Manufacturing in the cloud by locating your server off site or using a third party provider to host both the clients and server at a secure facility that gives you anytime, anywhere access.

Run Stand-Alone or Fully Integrated

MISys Manufacturing is designed to run by itself or integrated with the most popular accounting software systems to form a complete manufacturing business management system. By communicating directly with your accounting software, time-consuming and error-prone exporting and importing is eliminated.

Critical Data At Your Fingertips

Using a unique system of alerts, you can configure MISys Manufacturing to notify you when certain conditions are met or events occur within your manufacturing system. Through MISys Mobile Alerts you can send the alerts via email to one or multiple mobile devices and computers without having to log in to the system. The software will continue to monitor the parameters of the alert and will send the email(s) if the conditions are met.

MISys Manufacturing comes with 150+ standard reports. If you can't find exactly what you are looking for, you can write your own custom reports using Crystal Reports or edit existing ones using MISys Query (optional module).

Low Total Cost of Ownership

MISys Manufacturing starts at a competitive purchase price and has a low annual maintenance fee. There are no hidden costs, no risk of obsolescence, no surprises. The extensive functionality of the software exceeds competing software systems that are double the cost of MISys Manufacturing.

Designed With Room To Grow

MISys Manufacturing is modular, so you purchase only the functionality you need today. Start with Basic Manufacturing, then add from our menu of modules as your company grows.

Modular and Flexible - Select only the functionality you need.

Req.

Basic Manufacturing

The comprehensive building block for the MISys Manufacturing system. Control inventory levels of raw material and WIP, use multi-level bills of material, revise BOM's, conduct physical inventory cycle counting, and process production work orders.

Opt.

Advanced Purchasing

Analyze material shortages and automatically create all of the purchase orders needed to replenish inventory.

Opt.

Advanced Production

Predict the cost of every job and track performance as manufacturing orders for standard assemblies or special one-off items move through the shop.

Opt.

Materials Requirements Planning

Determine purchasing and production needs by analyzing current inventory, open orders and sales orders to spot impending shortages and respond by creating purchase and production orders.

Opt.

Shop Floor Control

Accurately predict production costs based on estimated material, labor, and overhead, and then analyze the actual production costs.

Opt.

Serial/Lot Tracking

Track serial or lot numbers throughout the entire purchasing and production process to comply with strict regulatory agency requirements, including FDA and FAA.

Opt.

Bin Tracking

Maintain a unique inventory sub-location for every item or assembly as raw materials, sub-assemblies, or finished goods in specific containers.

Opt.

Labor Tracking

Track the elapsed time production workers spend on selected Jobs and Manufacturing Orders and automatically post to the Manufacturing Order.

Opt.

Bar Coding

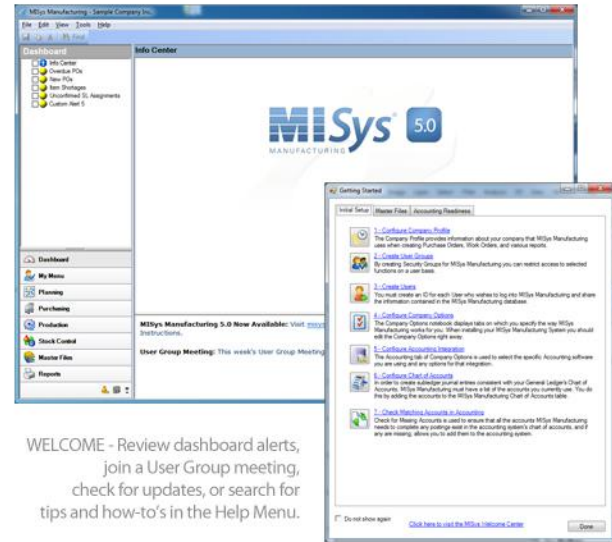

Print and collect bar coded data with hardware and software provided by MISys to seamlessly integrate with inventory control functions. Choose between offline or real-time bar coding.

Custom Reporting

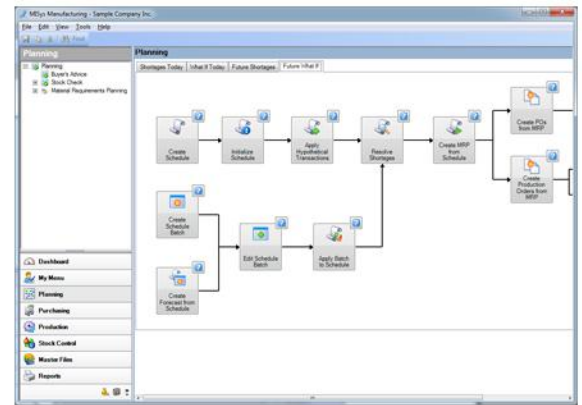

Create new custom reports and modify existing reports to gain better insight into your business.

Mobile Alerts

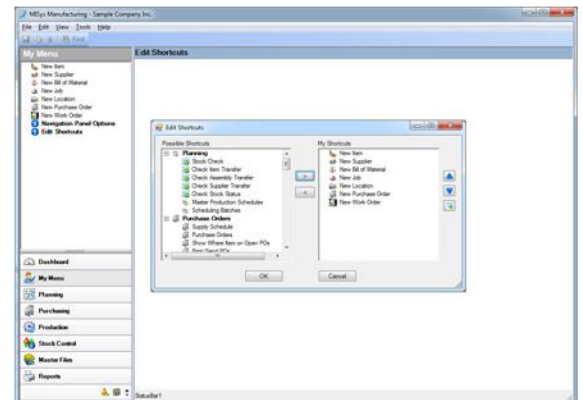

Send critical alerts to smart phones or any mobile device capable of receiving wireless email messages.

WELCOME - Review dashboard alerts, join a User Group meeting, check for updates, or search for tips and how-to's in the Help Menu.

ACTION MAPS - The primary modules in MISys Manufacturing include functional and interactive maps that allow for quick and efficient navigation.

STREAMLINED INTERFACE - Each user has the convenience of creating custom navigation. You can reduce the menu to the items you use the most.

Successful implementations begin with SureStart.

Get Up and Running with SureStart

We know that implementing a new computer system can be difficult. To make it easier, MISys created the SureStart program:

- A SureStart coach provides one-on-one guidance to your implementation project manager to get the manufacturing data in MISys Manufacturing.
- 20 hours of on-line training courses are offered every other week to your users. You can take the courses as many times as you want during your SureStart program.
- Priority Technical Support connects you by telephone to the technical experts at MISys to resolve operating issues you may encounter.

*SureStart is not offered by MISys outside of North America. Our international business partners provide installation and training assistance to customers, usually for a fee.

Comprehensive Training

MISys University hosts regularly scheduled training workshops on the basic operations of MISys as well as the more complex modules offered. The online training sessions are live and easily accessed via your computer with a broadband connection.

Technical Support

MISys provides Standard Technical Support to all MISys Manufacturing customers, guaranteeing a response via email within one business day of the receipt. Priority Technical Support provides users with telephone responses within one business day and is available through a number of flexible plans.

Minimum System Requirements

On-Premise: Microsoft Windows XP or Windows Vista or Windows 7, 2GHz processor, 1GB of RAM, Internet connection.

Cloud/Hosted: Windows PC, current browser and high speed internet.

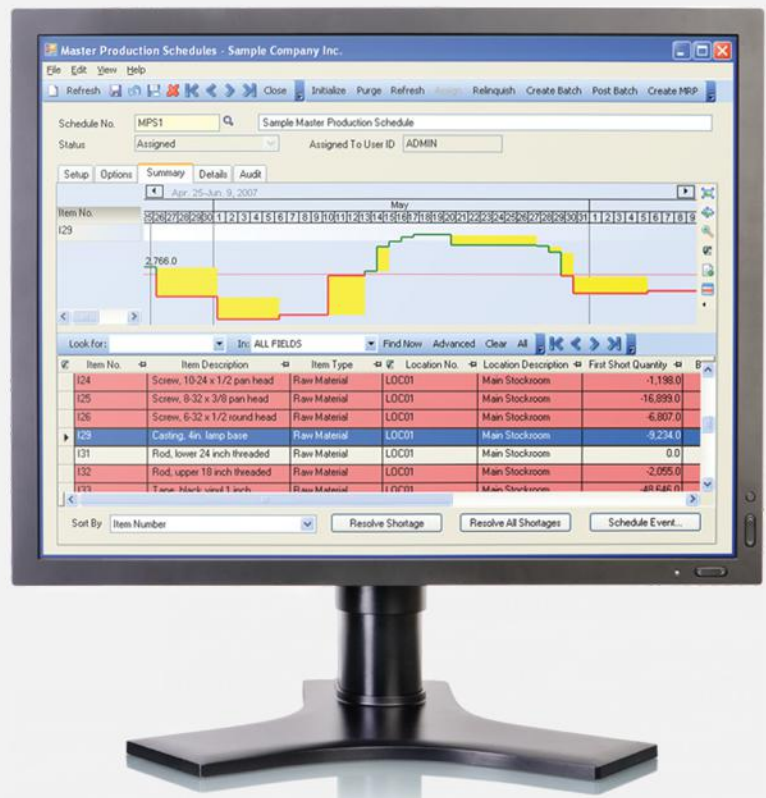

MISys Barcoding: Barcode reading devices and a receiving station that connects to the PC.
